

# 1 ACCESS THE PAYMENTS MENU

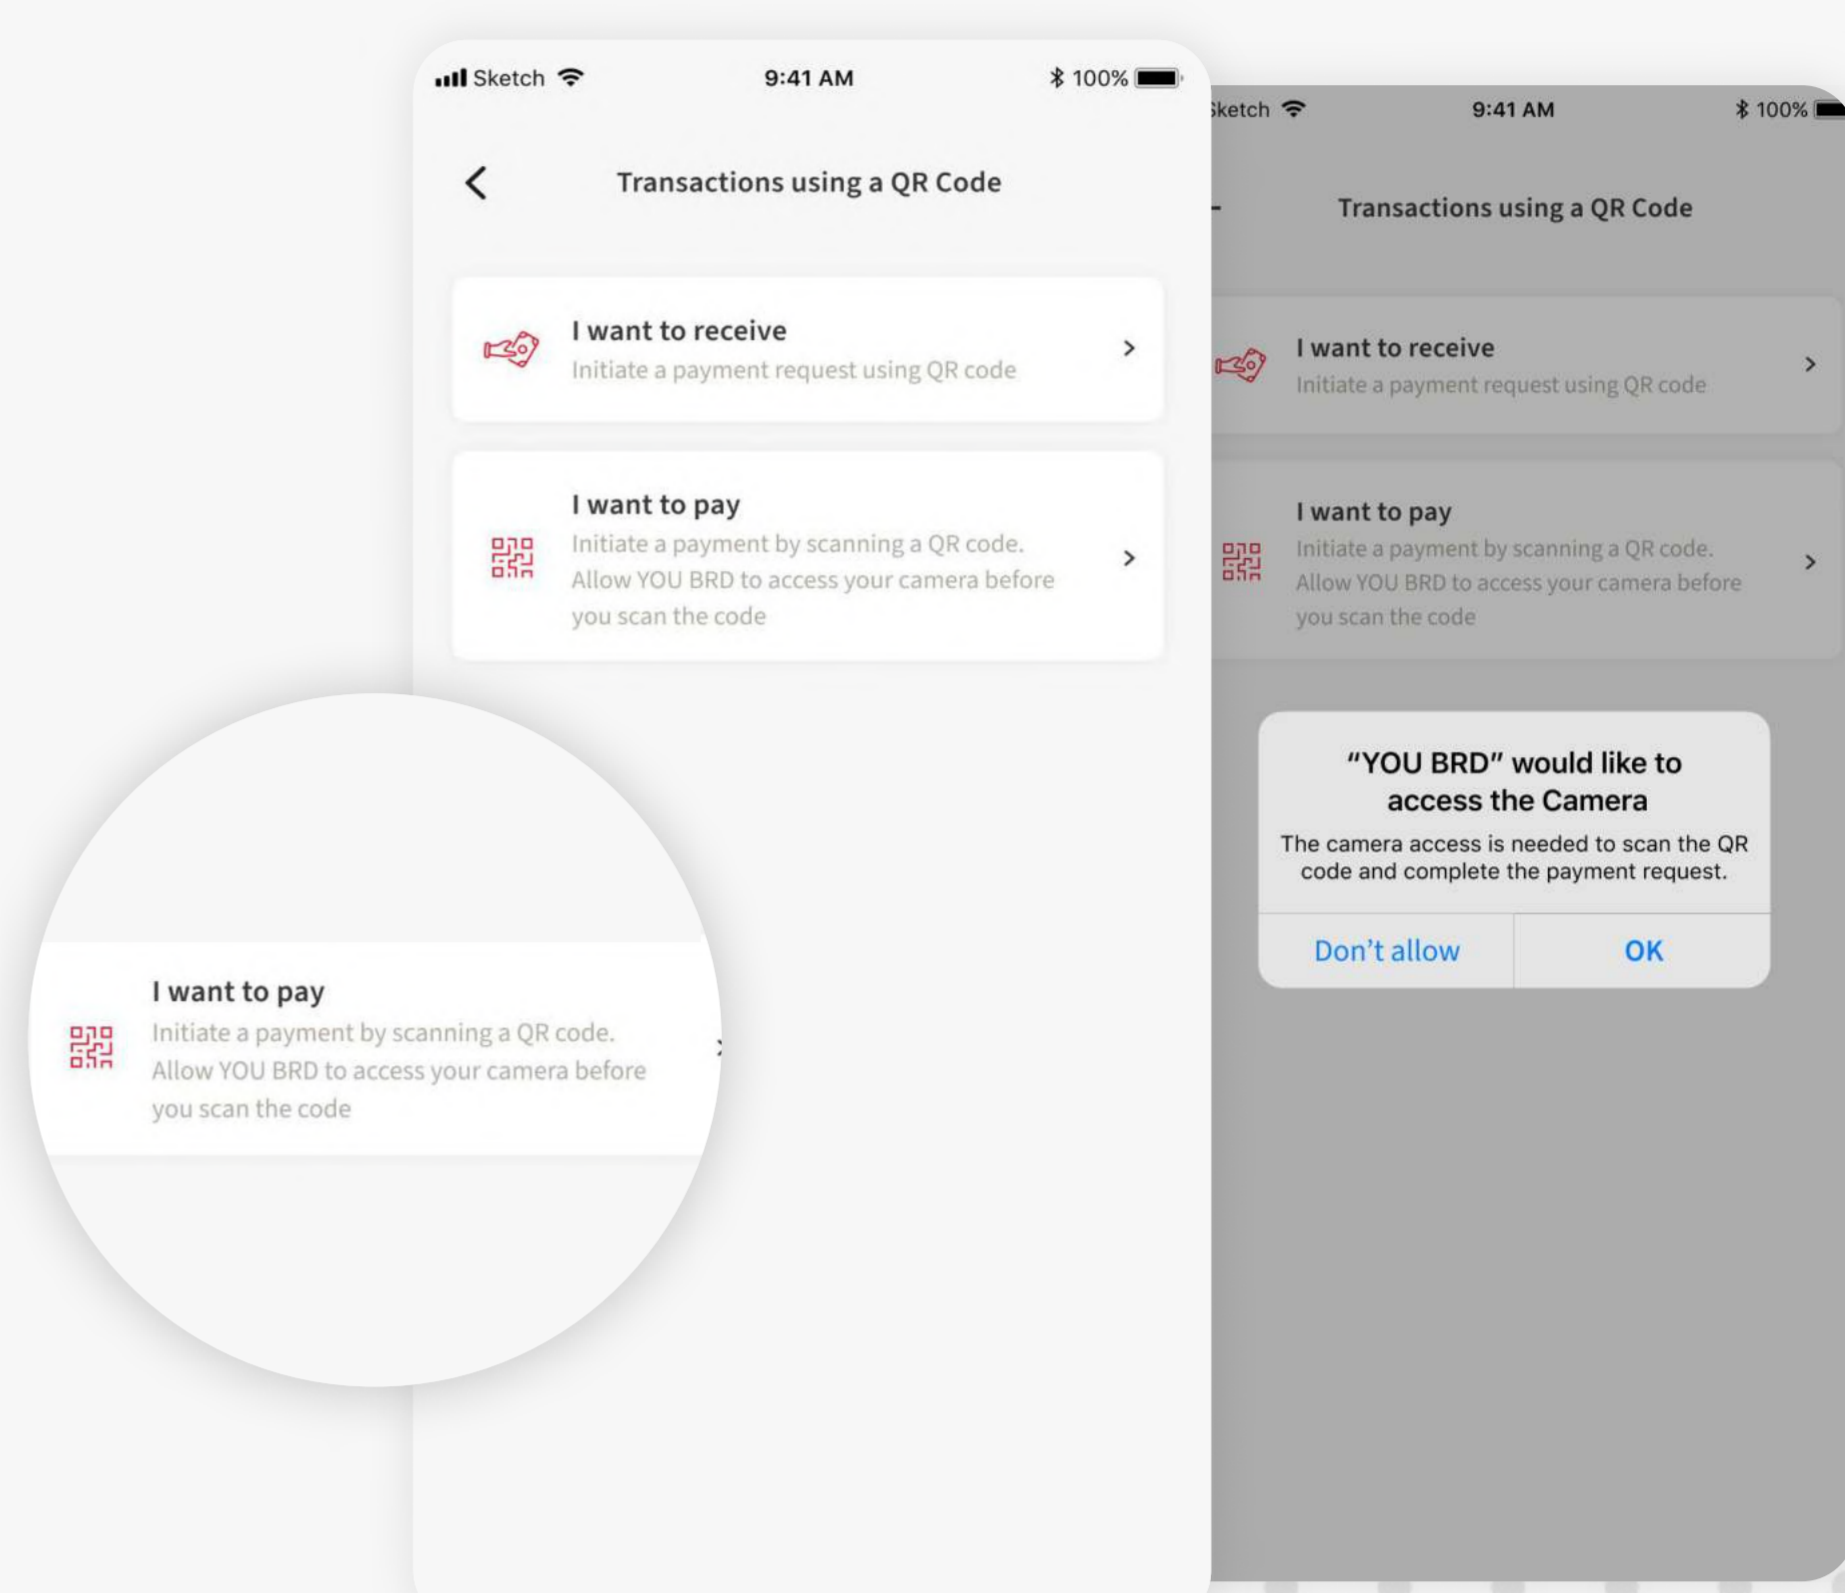

Click on the "Transactions by QR code" section. Here you will find two options: "I want to receive" and "I want to pay".

The QR code payment method is available exclusively for the YOU Mobile version and can only be used for proximity payments between two people next to each other.

# 2 PRESS ON "I WANT TO PAY"

If you want to pay a person next to you, press the "I want to pay" option and accept the use of your phone's camera to scan the QR code on the phone of the person to whom you want to pay.

Using this payment method there is **no need** to enter or to check the name and IBAN code of the payee.

# 3 SCAN THE QR CODE

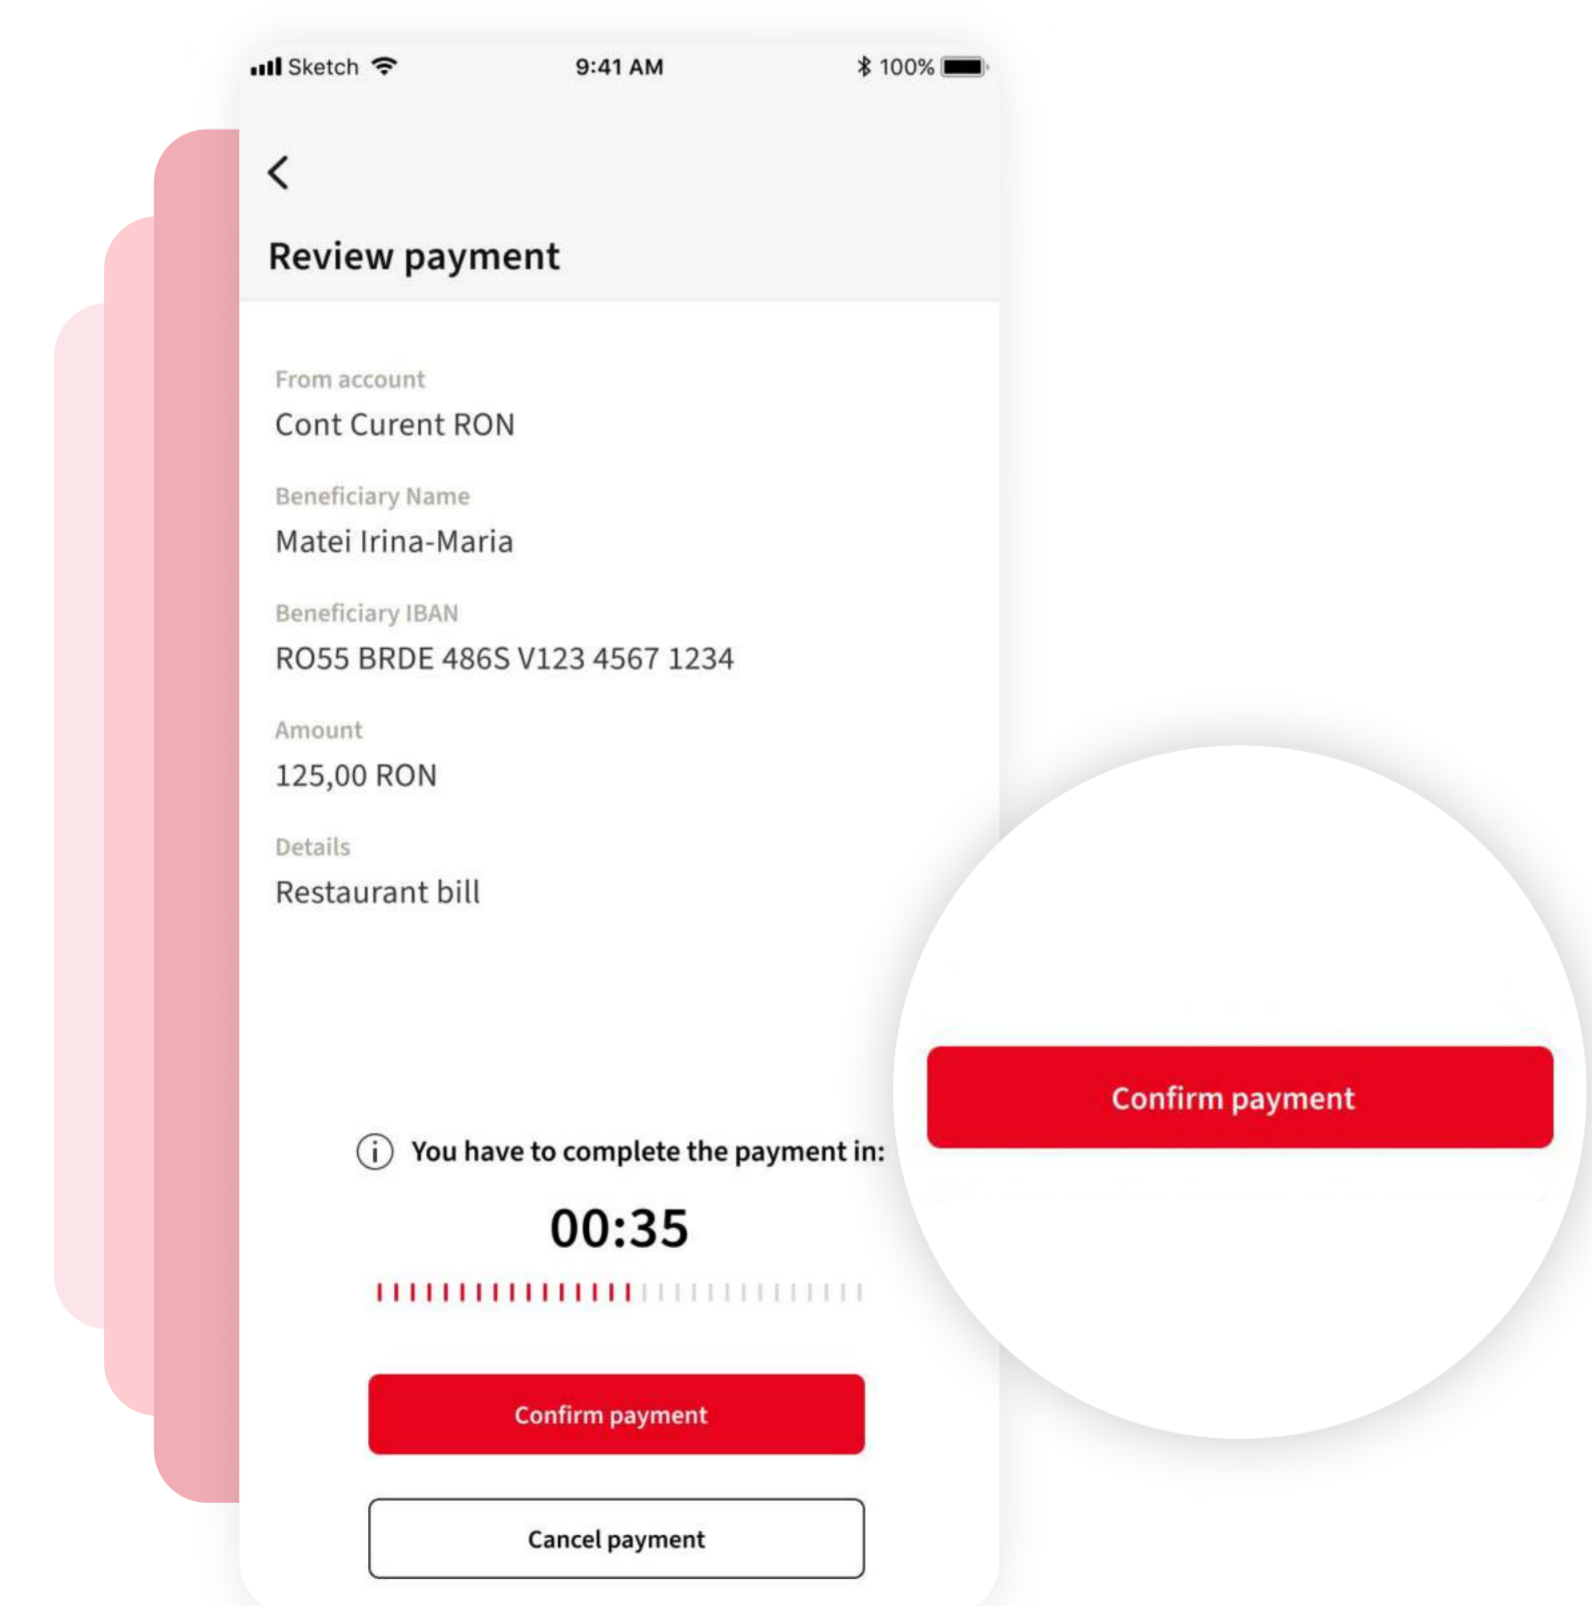

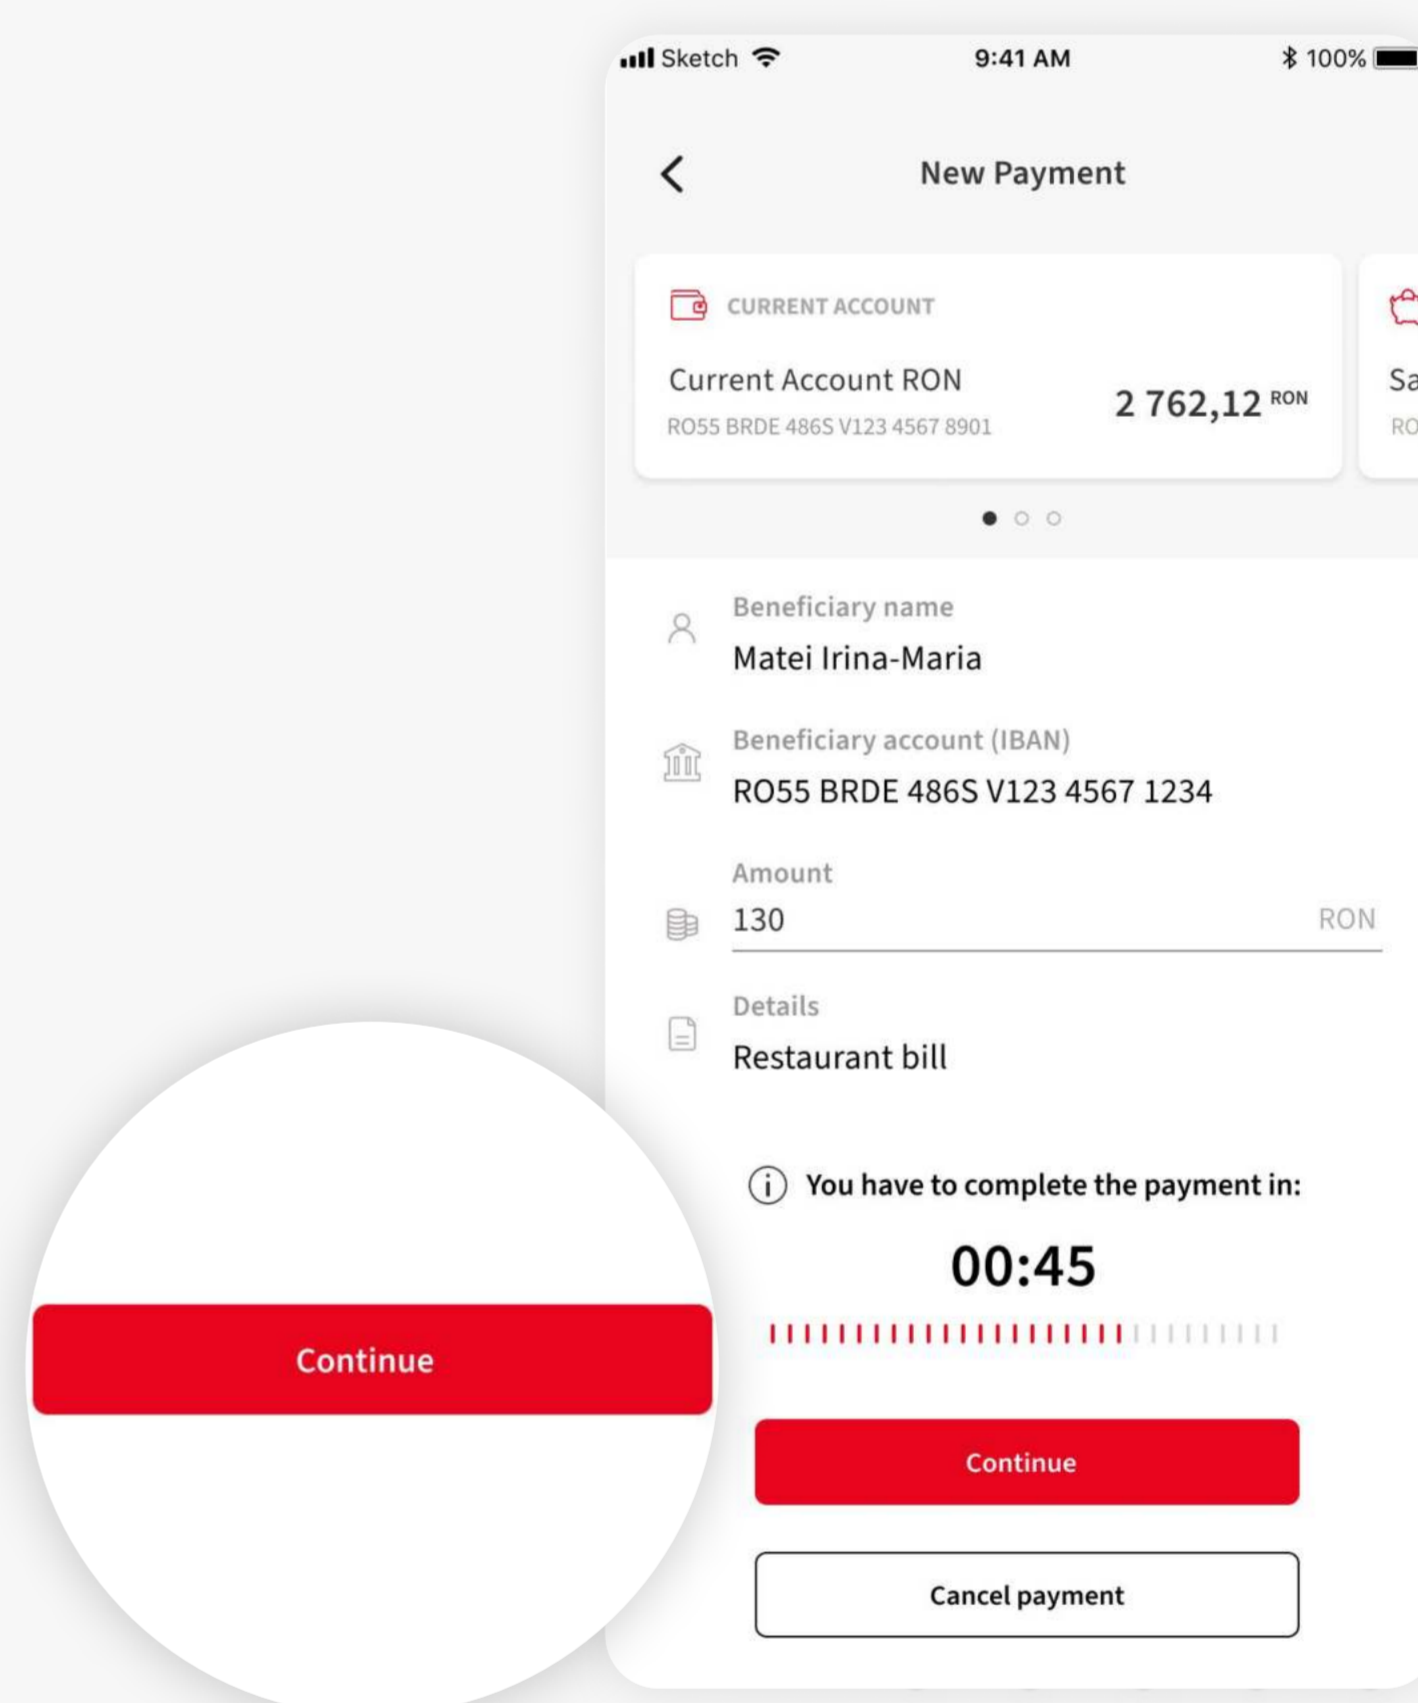

Scan the QR code displayed on the phone of the person next to you to whom you want to make the payment.

# 4 VERIFY THE DETAILS

After scanning the QR code, the details of the transfer will be displayed. All you have to do is choose the account from which you want to make the payment and check the amount requested by the beneficiary.

If you do not agree with the requested amount and payment details, you can change them. Then press "Continue".

If you have changed your mind and no longer wish to make the payment, then you can press the "Cancel payment" button.

# 5 REVIEW THE PAYMENT

In this step you will be able to recheck the transaction summary, then press "Confirm and transfer".

# 6 DONE!

In just a few seconds the money will reach the beneficiary, and you will receive a notification in this regard.

Is that simple!
