

1 ACCESS THE PAYMENTS MENU

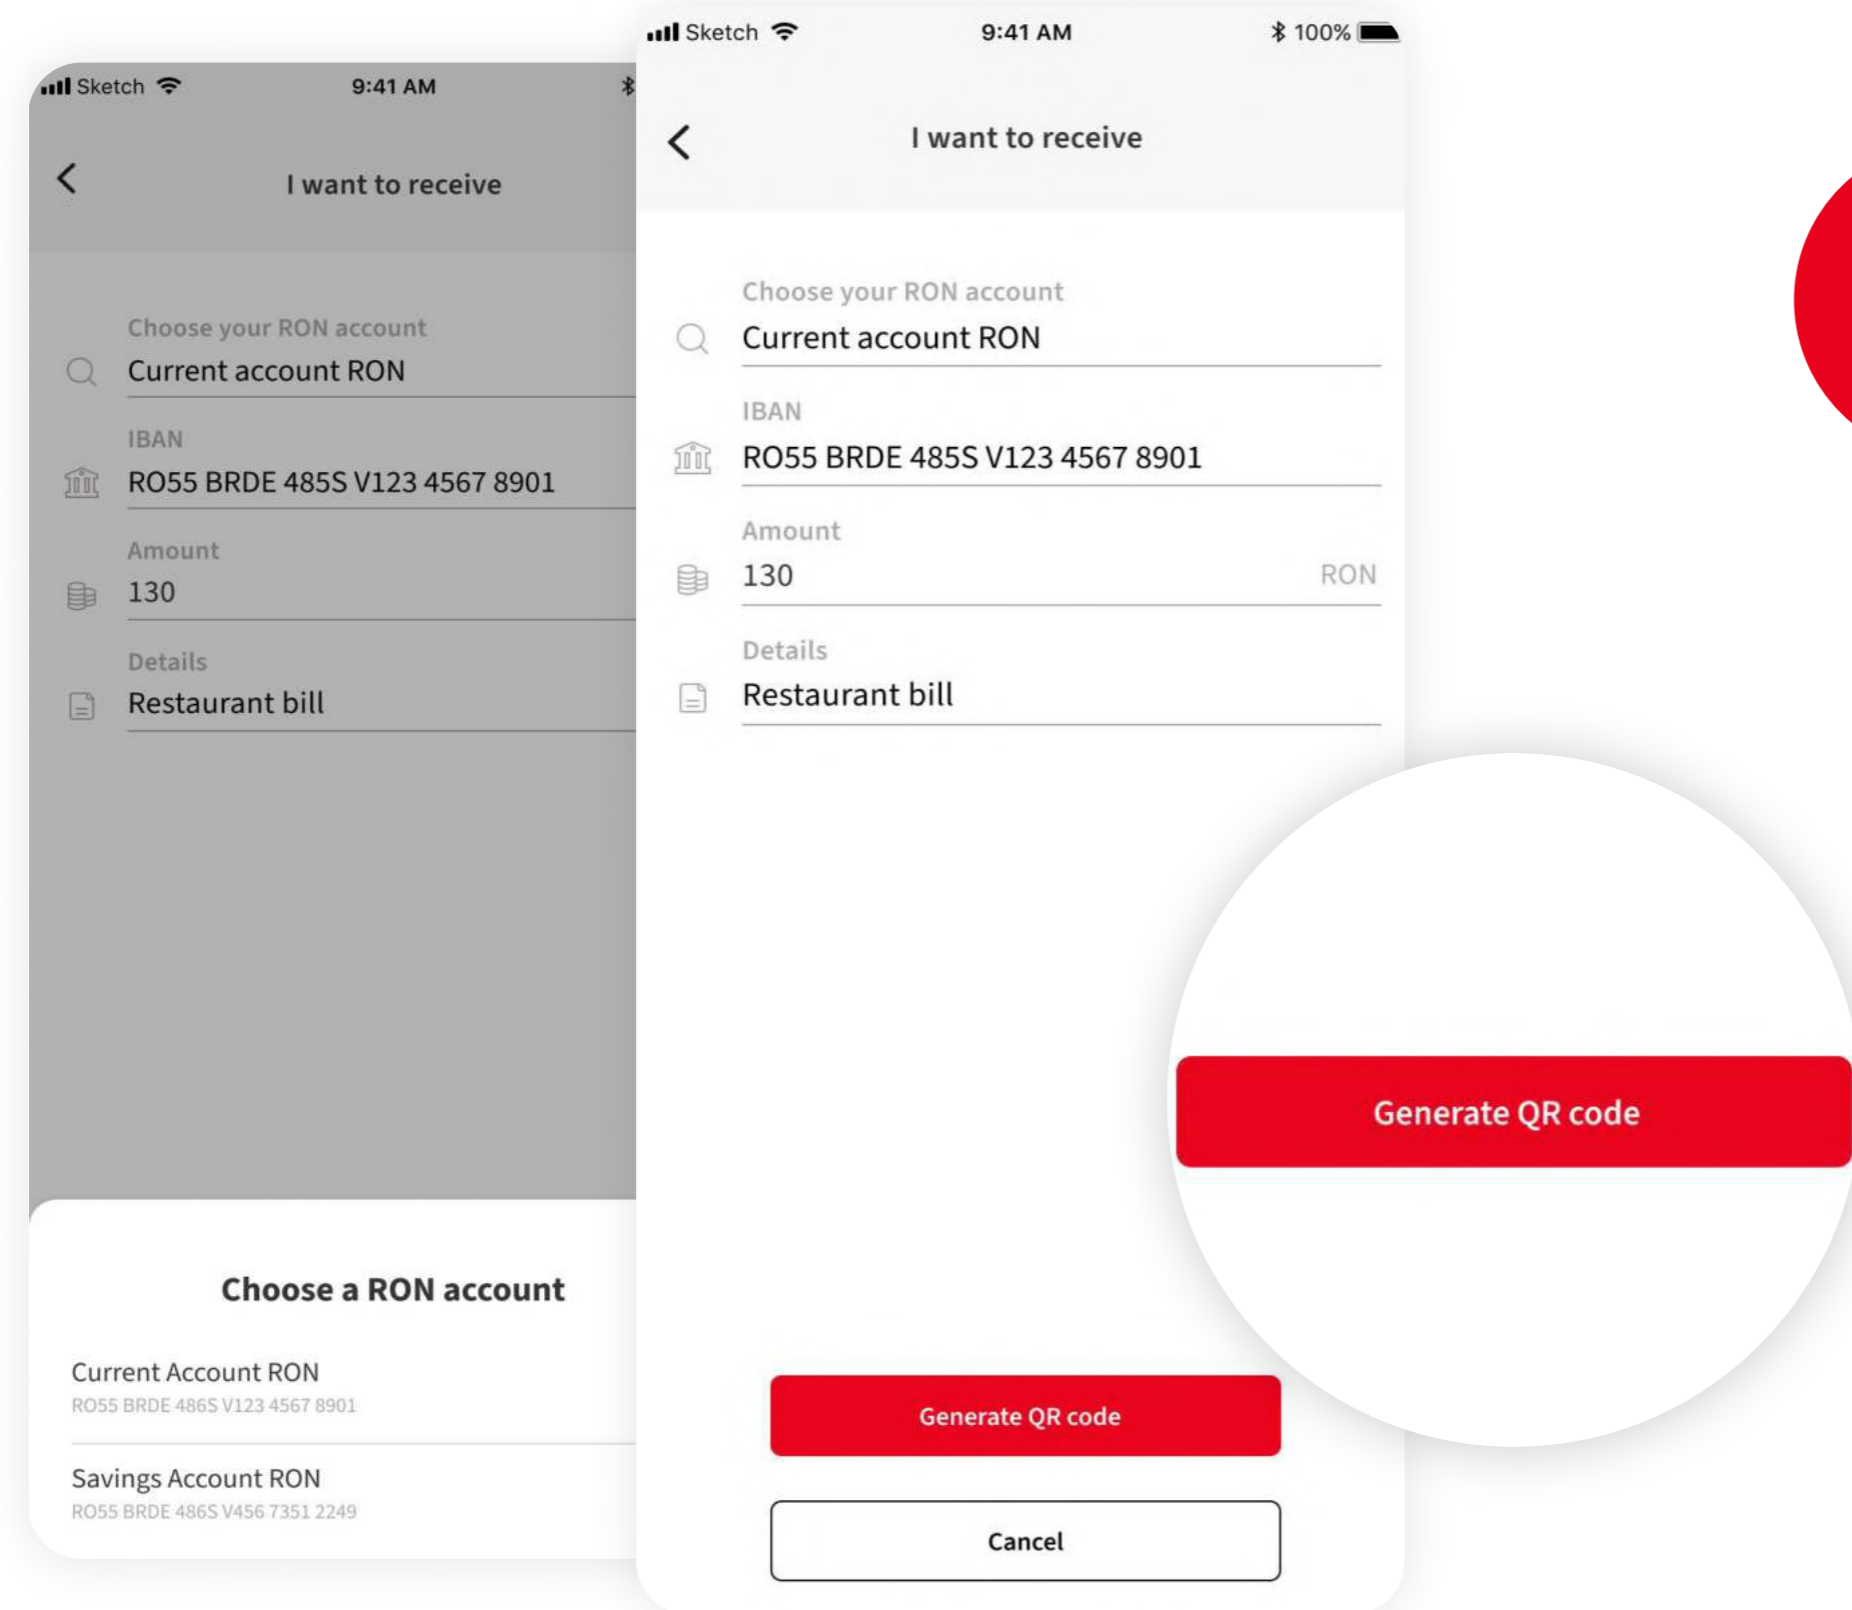

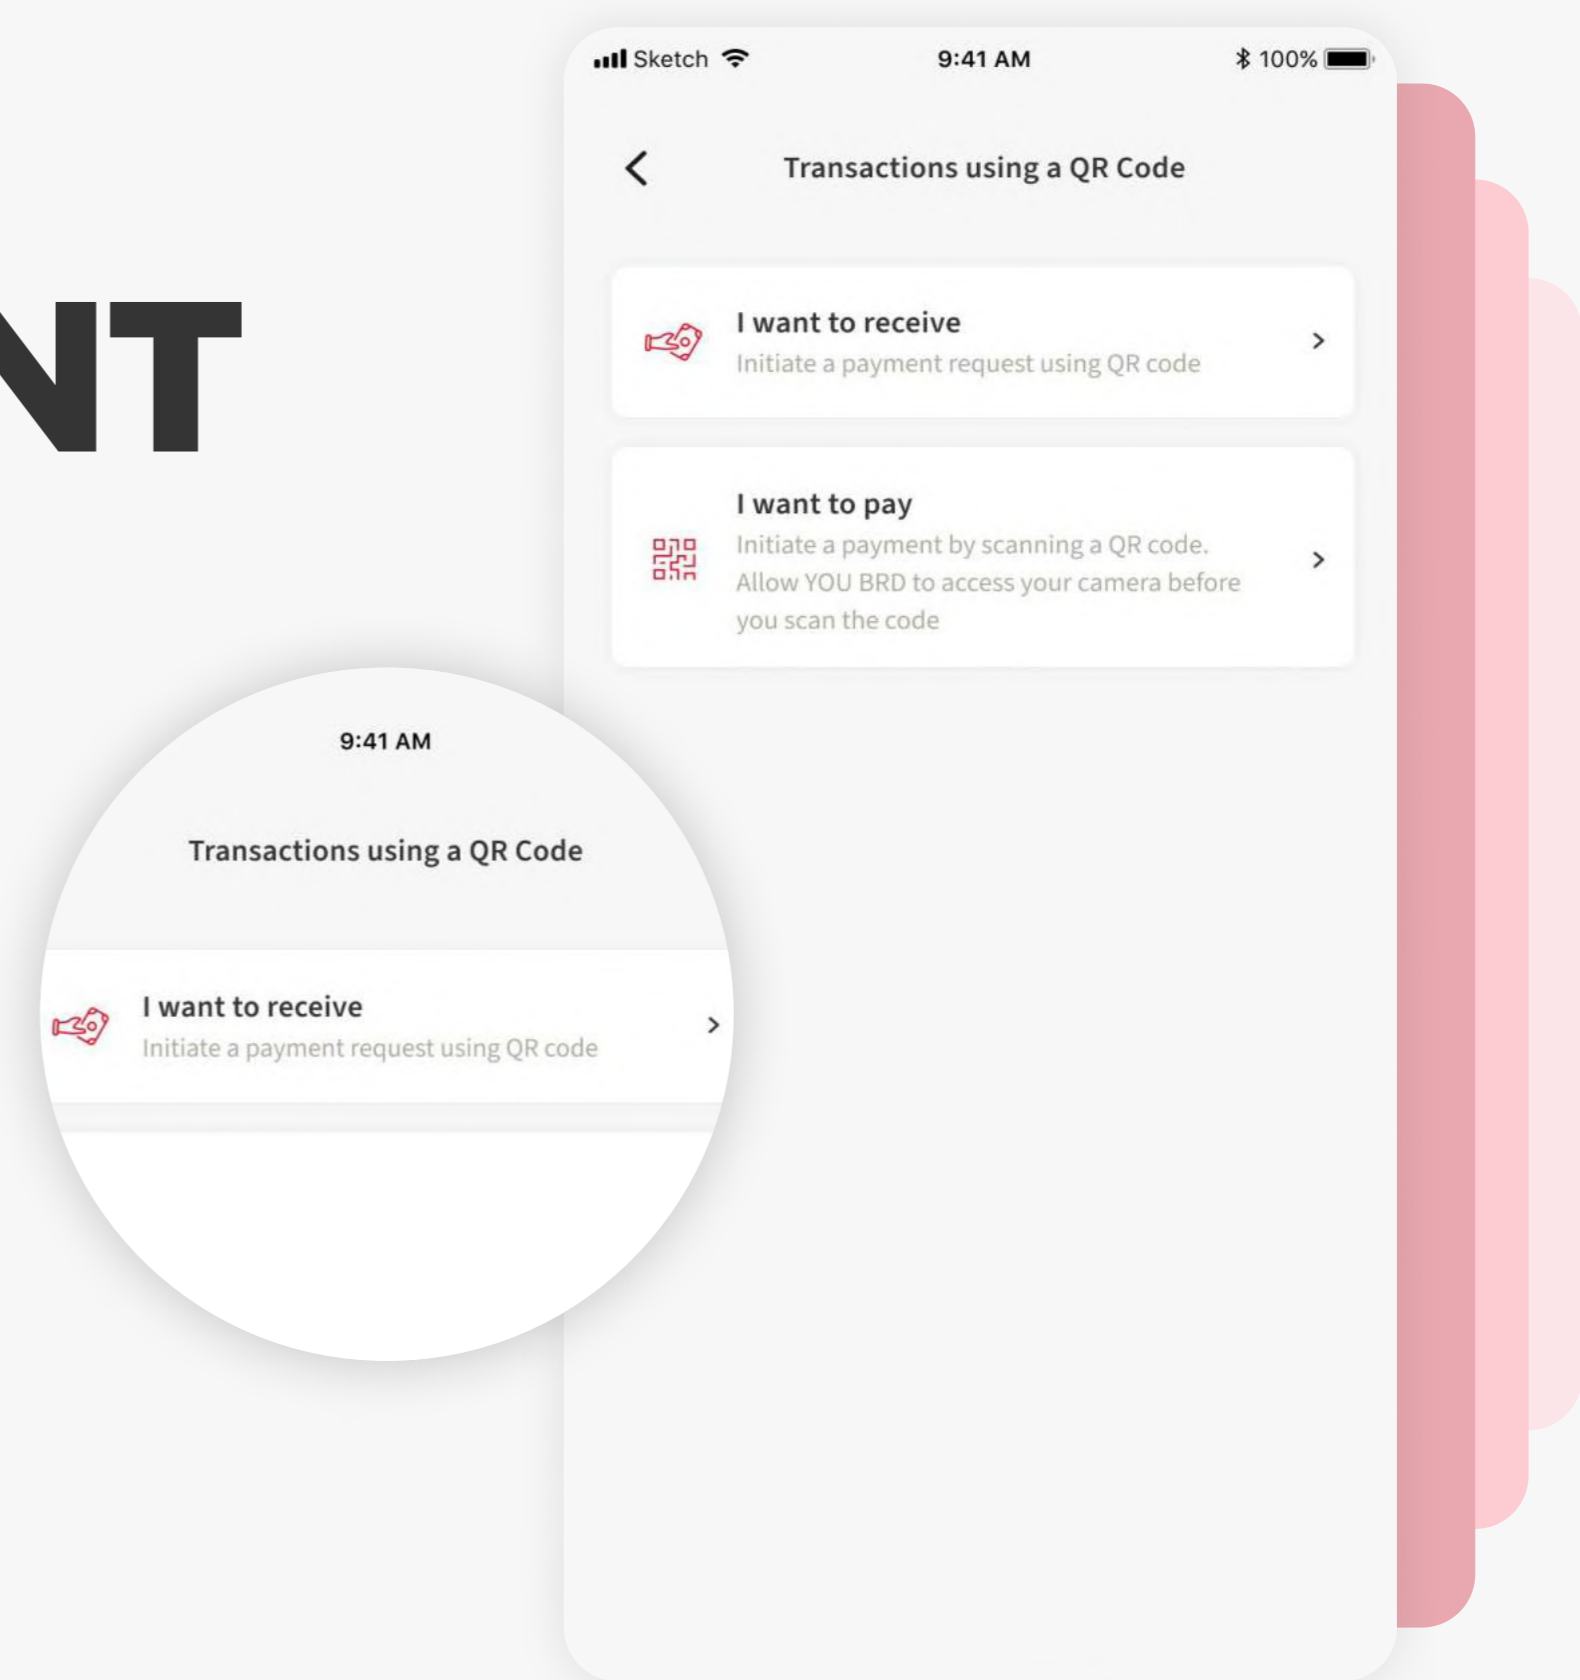

Click on the "Transactions by QR code" section. Here you will find two options: "I want to receive" and "I want to pay".

The QR code payment method is available exclusively for the YOU Mobile version and can only be used for proximity payments between two people next to each other.

2 PRESS ON "I WANT TO RECEIVE"

If you want to initiate a payment request from a person near you, press the "I want to pay" option and quickly fill out the small payment form.

For RoPay transactions, you don't need to know/complete the payer's data, because at the end you will show them the QR code related to the payment on your device.

3 COMPLETE THE REQUEST

You are just one step away from generating the QR code.

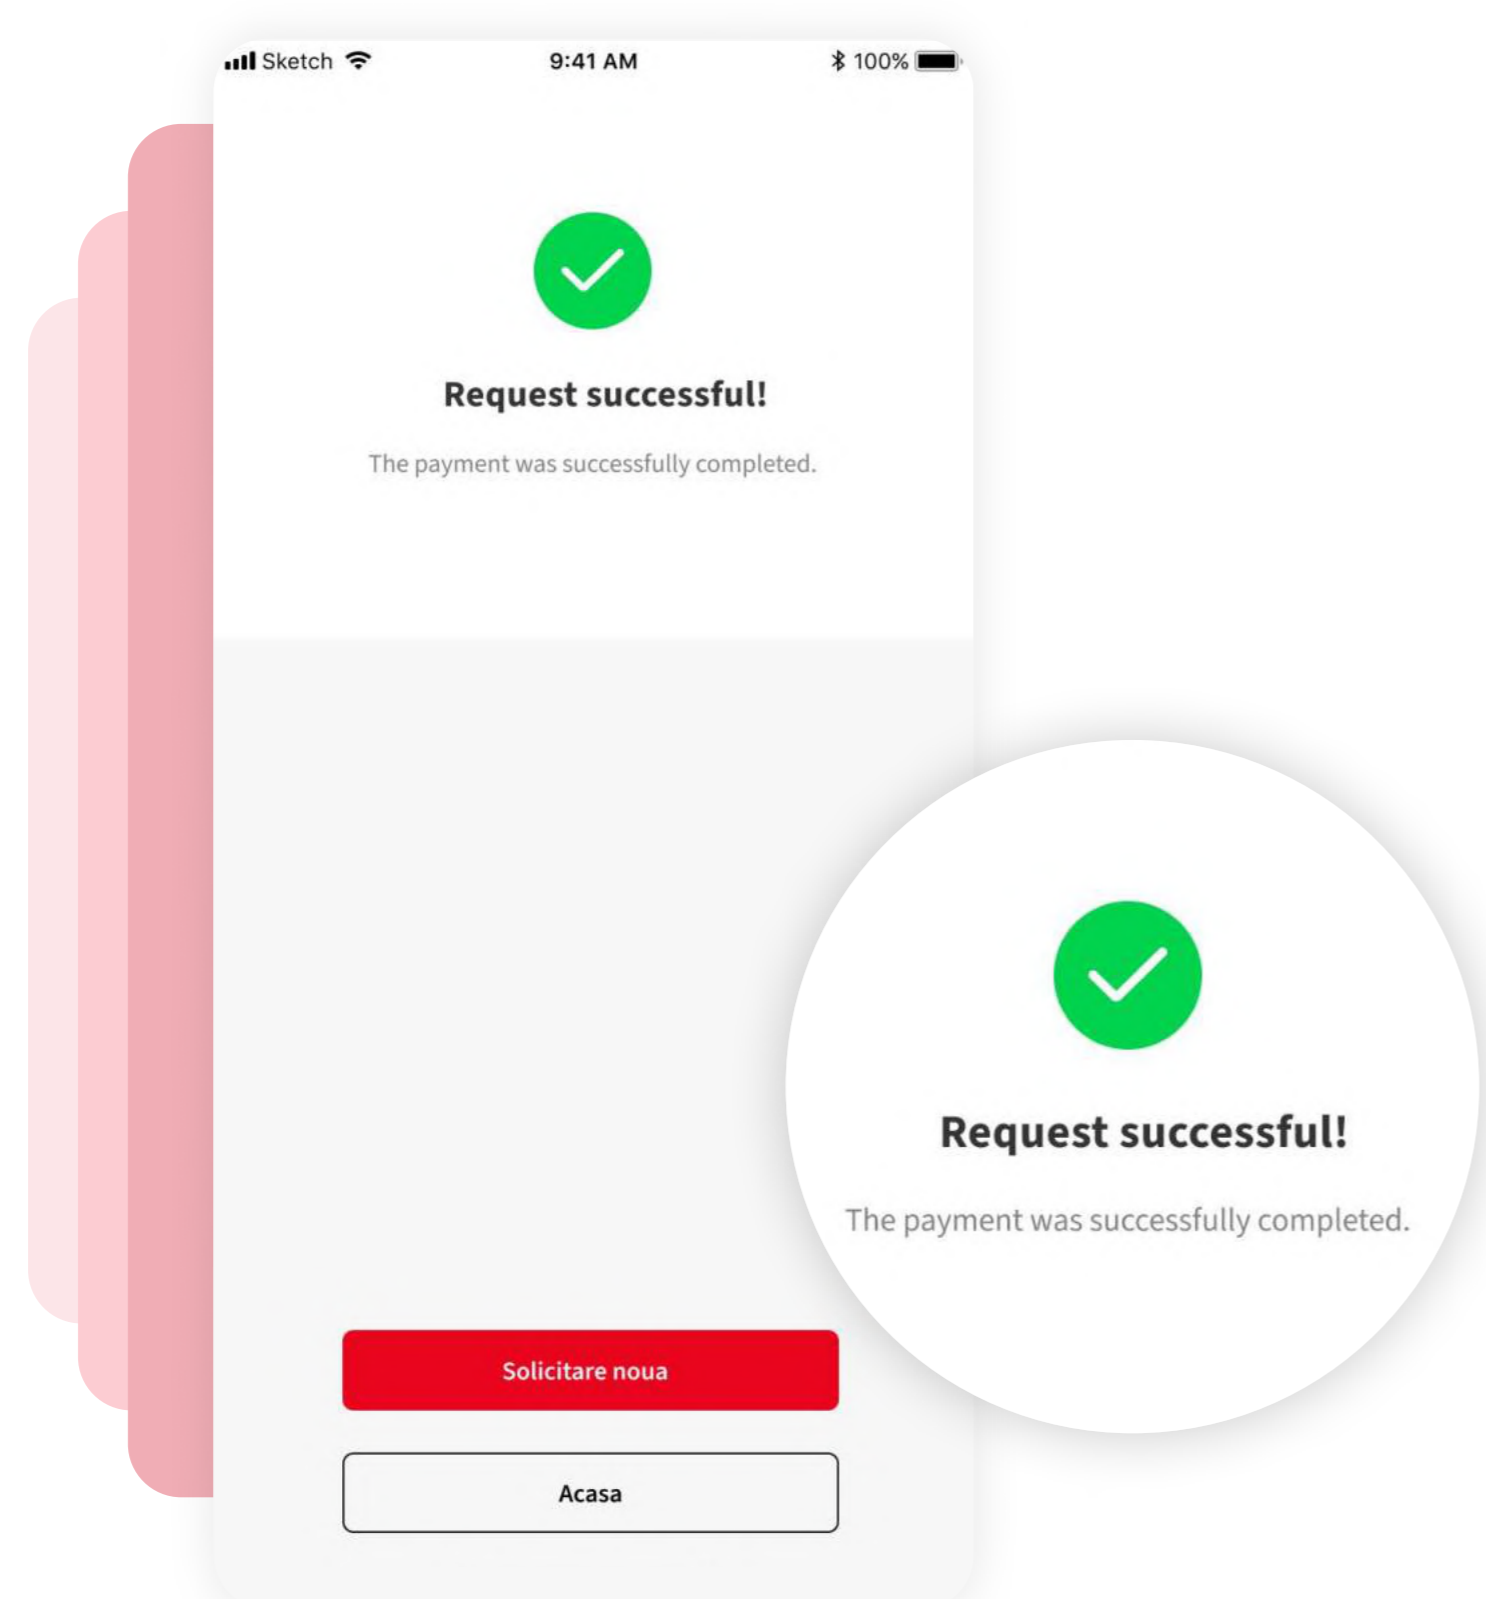

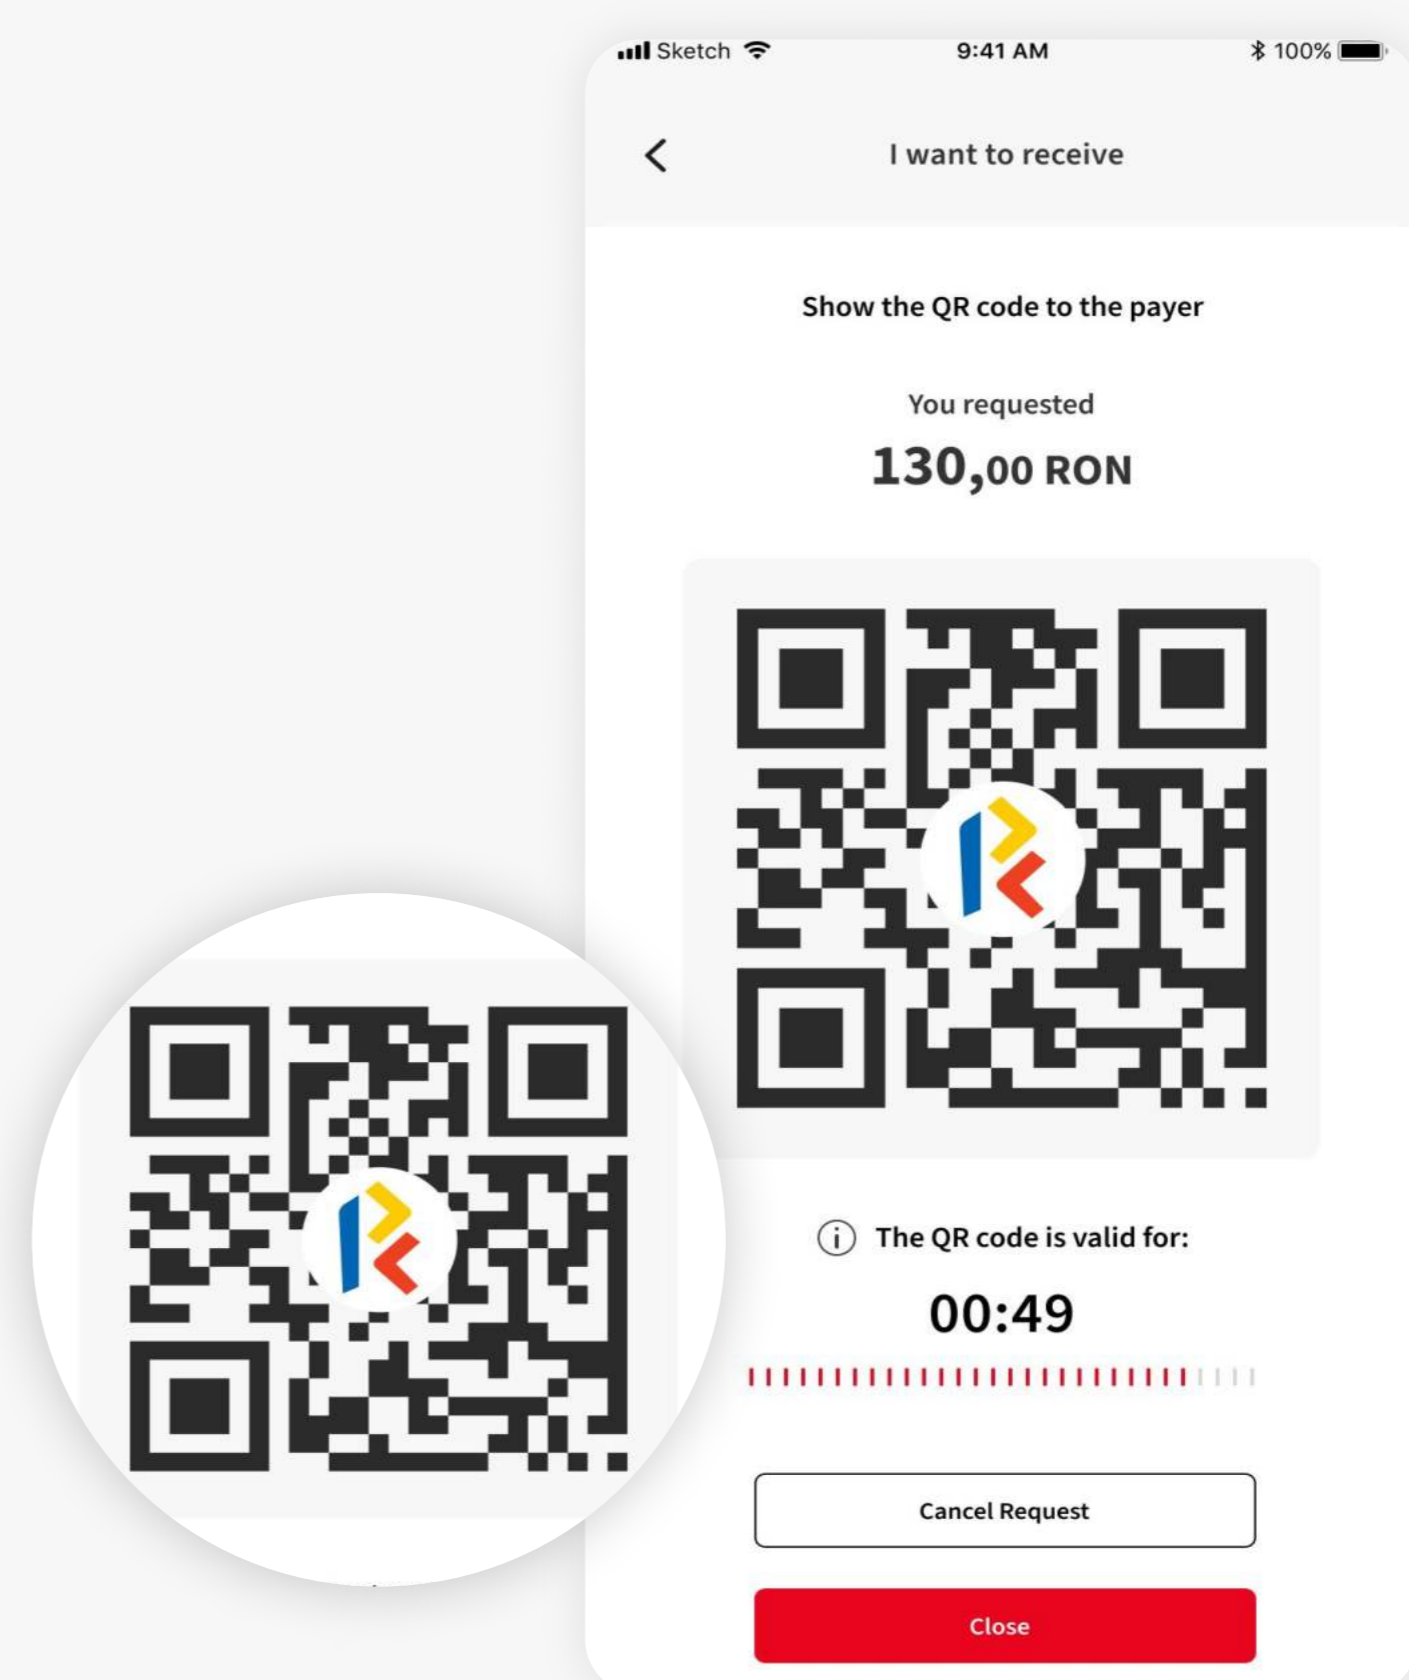

Select the account in which you want to collect the money, the amount you want to receive and the details of the transfer, then click on "Generate QR code".

If you have changed your mind and no longer wish to make the payment, then you can press the "Cancel!" button.

4 SHOW THE QR CODE OF THE PAYER

Present the QR code, displayed on the screen of your phone, to the payer, to be scanned by him.

The QR code has limited validity, so follow the expiration time displayed on the screen.

5 DONE!

After the payer has scanned the QR code, all you have to do is wait a few seconds for the amount to be collected.
